Car-alarm Door Sensors A valet switch is a manual shut-off that temporarily disables the alarm system (so you can let the valet park your car, for example). The valet switch is hidden in an out-of-the-way spot in the car. The switch pictured here is mounted under the car's fuse access panel.

An immobiliser is a requirement on all new cars produced since 1998 and stops the car from being removed without the correct key or fob. An alarm acts as an additio-

nal layer of security that deters would-be thieves, usually by emitting a loud sound or siren when certain sensors are triggered, like movement and vibration.

Protect your car from criminals with our range of car anti-theft devices and drive-way security deterrents. Buy online or in-store. Your browser's JavaScript functionality is turned off.

Step #1: Open the hood and attach the siren to any solid metal surface underneath. Place the siren's horn facing down in order that no water can get into it. Step #2: Make a hole in the car's rubber firewall. Thread the siren's wire through that

hole into the passenger compartment.

6. Add a car alarm, immobiliser or tracking device. Most modern cars will come with a factory fitted immobiliser, but adding a Thatcham-approved car alarm can reduce your car insurance premium as well as the risk of car theft. If you have no car security at all, make fitting an immobiliser a top priority.

The engine immobiliser has revolutionised car security. It uses coding software to ensure the correct key is being used to start your car. When you insert the key it 'talks' electronically to the immobiliser and the engine which will only start if the correct key is used.

On your car alarm unit, run the valet switch, LED lights, and external antenna before connecting everything to the siren. Next is to connect the different sensors such as those on your door, dome light, trunk, and hood, just to name a few. Lastly, hook up the alarm unit to its power source to get it up and running. Type of Car Alarm

Many modern vehicles come standard with car keys and fobs that protect their cars

via electronic immobilizers. These built-in transponders or microchips send signals to the anti-theft system, which then send a signal that it's ok to start the car. When anyone attempts to use the car without these signals, the car will not start.

The Owner's Manual will familiarise you with the operational, maintenance and safety information to make the most of your Kia car.
