~~The Creative Brain | Official Trailer—Big Think~~

Abstract. Recent studies have provided insight into inter-individual differences in creative thinking, focusing on characterizations of distributed large-scale brain networks both at the local level of regions and their pairwise interactions and at the global level of the brain as a whole. However, it remains unclear how creative thinking relates to mesoscale network features, e.g. community and hub organization.

~~Community structure of the creative brain at rest ...~~

I think [the neuroscience of creativity] is telling that most creative people are polygeniuses - equally gifted in art, science, invention (Leonardo da DaVinci is the best example). Yet now students of science/technology enroll in only courses related to that curriculum, stifling their more global mental gifts that might contribute to progress in fields related to literature and art."

~~The Science of Creativity—HubSpot~~

Neuroanatomical and neurophysiological aspects have naturally also been considered: after all, no matter how one looks at the topic, creativity is the product of the activity of the brain. Surprisingly, however, in depth and comprehensive studies of brain anatomy (including microanatomy), and physiology are very scarce.
